Repair

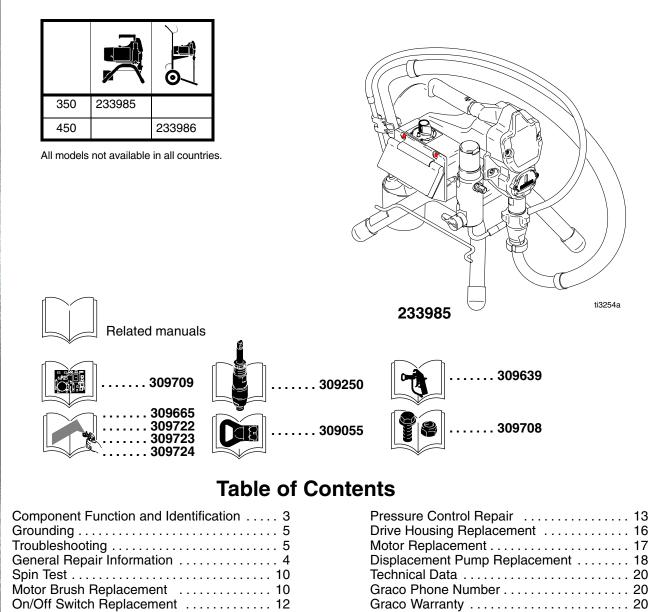

EUROPRO 350/450[™] Airless Sprayers

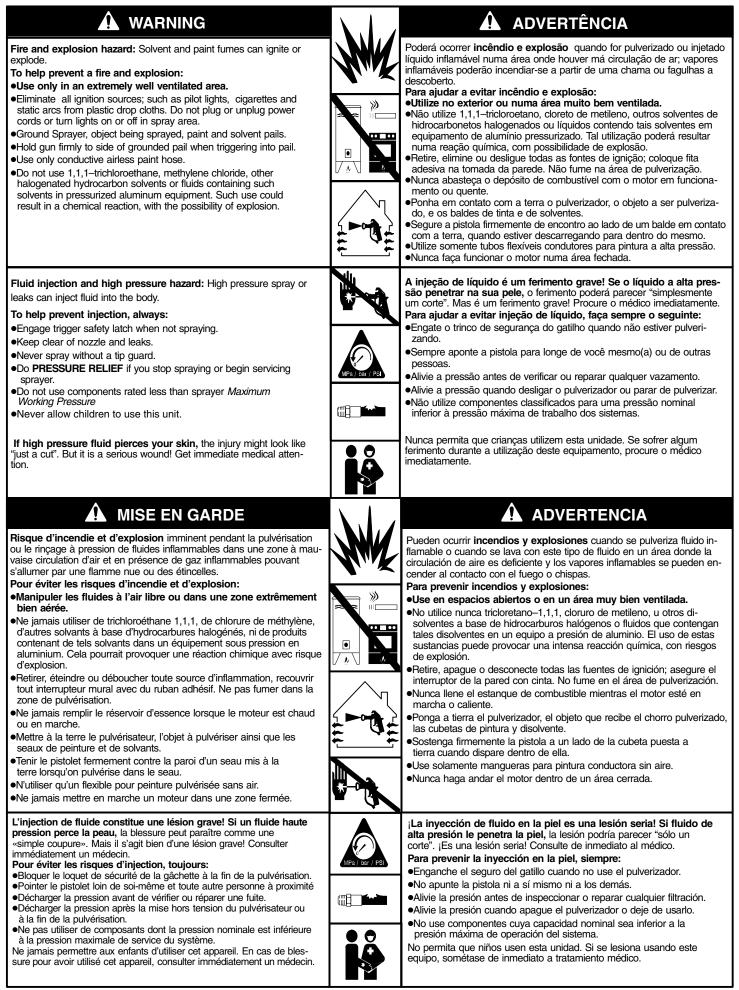

309733 печ. в

230V

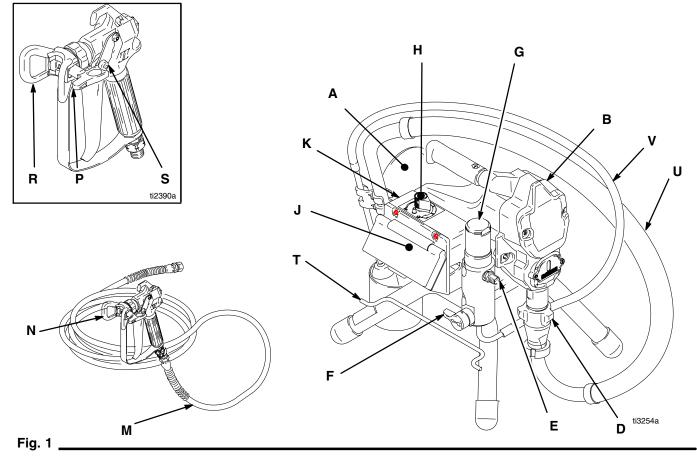

3300 psi (227 bar, 22.7 MPa) Maximum Working Pressure

PROVEN QUALITY. LEADING TECHNOLOGY.

Component Identification and Function

Α	Motor	DC motor, permanent magnet, totally enclosed, fan cooled
В	Drive Assembly	Transfers power from DC motor to displacement pump
D	Displacement Pump	Transfers fluid to be sprayed from source through spray gun
Ε	Fluid Outlet	Spray gun is connected here
F	Prime Valve	Used to prime and drain sprayer (also relieves fluid outlet pressure) when open
G	Fluid Filter	Final filter of fluid to spray gun
н	Pressure Adjusting Knob	Controls fluid outlet pressure
J	Pressure Control	Controls motor speed to maintain fluid outlet pressure at displacement pump outlet. Works with pressure adjusting knob.
Κ	ON/OFF Switch	Power switch that controls main power to sprayer
Μ	50 ft (15 m) Main Hose	1/4 in. ID, grounded, nylon hose with spring guards on both ends
Ν	Spray Gun	High pressure spray gun with gun safety latch
Ρ	Spray Tip	Uses high pressure fluid to clear tip clogs without removing tip from spray gun
R	HandTite [™] Tip Guard	Tip guard reduces risk of injection injury
S	Gun Safety Latch	Gun safety latch inhibits accidental triggering of spray gun. Contactor II gun shown. Refer to your gun manual to properly set your gun safety latch.
Т	Power Cord Rack	Holds wrapped power cord for storage
U	Suction Hose	Transfers fluid to be sprayed from source to pump
۷	Drain Tube	Fluid outlet used to drain and prime the sprayer

General Repair Information

Pressure Relief Procedure

WARNING

INJECTION HAZARD

System pressure must be manually relieved to prevent system from starting

or spraying accidentally. Fluid under high pressure can be injected through skin and cause serious injury. To reduce risk of injury from injection, splashing fluid, or moving parts, follow **Pressure Relief Procedure** whenever you:

- are instructed to relieve pressure,
- stop spraying,
- check or service any system equipment,
- or install or clean spray tip.
- 1. Lock gun safety latch.
- 2. Turn ON/OFF switch to OFF.
- 3. Unplug power supply cord.
- 4. Unlock gun safety latch. Hold metal part of gun firmly to grounded metal pail. Trigger gun to relieve pressure.
- 5. Lock gun safety latch.
- 6. Open pressure drain valve. Leave pressure drain valve open until ready to spray again.

If suspected that spray tip or hose is completely clogged, or that pressure has not been fully relieved after following steps above, VERY SLOWLY loosen tip guard retaining nut or hose end coupling to relieve pressure gradually, then loosen completely. Now clear tip or hose obstruction.

To reduce risk of pressure control malfunction:

- Use needle nose pliers to disconnect wire. Never pull on wire, pull on connector.
- Mate wire connectors properly. Center flat blade of insulated male connector in female connector.
- Route wires carefully to avoid interference with other connections of pressure control. Do not pinch wires between cover and control box.

1. Keep all screws, nuts, washers, gaskets, and electrical fittings removed during repair procedures. These parts are not normally provided with replacement assemblies.

WARNING

ELECTRIC SHOCK HAZARD MOVING PARTS HAZARD To reduce risk of serious injury, including electric shock, do not touch moving or electrical parts with fingers or tools while

testing repair. Shut off and unplug sprayer when inspection is complete. Install all covers, gaskets, screws, washers and shroud before operating sprayer.

- 2. Test repair after problem is corrected.
- 3. **If sprayer does not operate properly**, review repair procedure to verify procedure was done correctly. If necessary, see Troubleshooting Guide, pages 5 9, for other possible solutions.

A WARNING

HOT SURFACES HAZARD EXPLOSION HAZARD

Motor housing may be very hot during operation and could burn skin if touched. Flammable materials spilled on hot, bare motor could cause fire or explosion. Have motor shroud in place during operation to reduce risk of burns, fire or explosion or cut fingers.

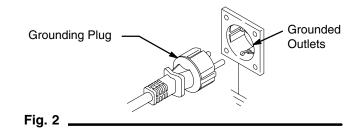

Do not run sprayer dry for more than 30 seconds to avoid damaging pump packings.

4. **Install motor shroud before operation** of sprayer and replace if damaged. Motor shroud directs cooling air around motor to prevent overheating. It can reduce risk of burns, fire or explosion, or cut fingers; see preceding **WARNING**.

Grounding

Improper installation or alteration of grounding plug results in risk of electric shock, fire or explosion that could cause serious injury or death.

- 1. Sprayers require a 220–240 Vac, 50 Hz, 10A circuit with a grounding receptacle. See Fig. 2.
- 2. Do not alter ground prong or use adapter.

 220–240 Vac: You may use a 3-wire, 1.0 mm (12 AWG) (minimum) extension cord up to 90 m long. Long lengths reduce sprayer performance.

Troubleshooting

Relieve pressure; page 4.

MOTOR WON'T OPERATE

TYPE OF PROBLEM	WHAT TO CHECK If check is OK, go to next check	WHAT TO DO When check is not OK refer to this column		
Basic Fluid Pressure Problems	1. Pressure control knob setting. Motor will not run if at minimum setting (fully counterclockwise).	1. Slowly increase pressure setting to see if mo- tor starts.		
	2. Spray tip or fluid filter may be clogged.	2. Relieve pressure and clear clog or clean fil- ter; refer to separate gun or tip instruction manual.		
Basic Mechanical Problems	1. Pump (41) for frozen or hardened paint.	1. Thaw sprayer if water or water-based paint has frozen in sprayer. Place sprayer in warm area to thaw. Do not start sprayer until thawed completely. If paint hardened (dried) in sprayer, replace pump packings. See page 18 (Displacement Pump Replace- ment).		
	2. Displacement pump connecting rod pin (9a). Pin must be completely pushed into connecting rod (9) and retaining spring (9b) must be firmly in groove of pump pin. See Fig. 10.	 Push pin into place and secure with spring re- tainer. 		
	3. Motor (54). Remove drive housing assembly (42). See page 16. Try to rotate fan by hand.	3. Replace motor (54) if fan won't turn. See page 17.		
Basic Electrical Problems	1. Motor control board. Board shuts down and dis- plays error code.	1. See Motor Control Board Diagnostics, page 13.		
	 Electrical supply. Meter must read: 210–255 Vac. 	 Reset building circuit breaker; replace build- ing fuse. Try another outlet. 		
	3. Extension cord. Check extension cord continu- ity with volt meter.	3. Replace extension cord.		
	4. Sprayer power supply cord (56). Inspect for damage such as broken insulation or wires.	4. Replace power supply cord.		

MOTOR WON'T OPERATE (Continued)

TYPE OF PROBLEM	WHAT TO CHECK If check is OK, go to next check	WHAT TO DO When check is not OK refer to this column		
Basic Electrical Problems (continued)	1. That motor leads are securely fastened and properly mated.	1. Replace loose terminals; crimp to leads. Be sure terminals are firmly connected.		
		Clean circuit board terminals. Securely re- connect leads.		
	2. For loose motor brush lead connections and ter- minals. See page 10.	2. Tighten terminal screws. Replace brushes if leads are damaged. See page 10.		
	3. Brush length which must be 1/2 in. minimum. See page 10.	3. Replace brushes. See page 10.		
	NOTE: Brushes do not wear at the same rate on both sides of motor. Check both brushes.			
	 For broken or misaligned motor brush springs. Rolled portion of spring must rest squarely on top of brush. See page 10. 	 Replace spring if broken. Realign spring with brush. See page 10. 		
	 Motor brushes may be binding in brush holders. See page 10. 	5. Clean brush holders. Remove carbon with small cleaning brush. Align brush leads with slot in brush holder to assure free vertical brush movement.		
	 Motor armature commutator for burn spots, gouges and extreme roughness. See page 10. 	6. Remove motor and have motor shop resur- face commutator if possible. See page 17.		
	7. Motor armature for shorts using armature tester (growler) or perform spin test. See page 10.	7. Replace motor. See page 17.		
Refer to wiring diagram on Fig. 7 to identify test points (TP).	 Power supply cord (56). Connect volt meter be- tween TP1 (neutral) and TP2. Plug in sprayer. Meter must read: 210–255 Vac Unplug sprayer. 	1. Replace power supply cord.		
	 ON/OFF switch (58). Connect volt meter be- tween L1 and L2 terminal on ON/OFF switch. Plug in sprayer and turn ON. Meter must read: 210–255 Vac. 	2. Replace ON/OFF switch. See page 12.		
	3. All terminals for damage or loose fit.	3. Replace damaged terminals and reconnect securely.		

LOW OR FLUCTUATING OUTPUT

TYPE OF PROBLEM	WHAT TO CHECK If check is OK, go to next check	WHAT TO DO When check is not OK refer to this column		
Low Output	1. For worn spray tip.	1. Follow Pressure Relief Procedure Warn- ing , then replace tip. See your separate gun or tip manual.		
	 Verify pump does not continue to stroke when gun trigger is released. 	2. Service pump. See page 18.		
	3. Filter clogged.	3. Relieve pressure. Check and clean filter.		
	4. Prime valve leaking.	4. Relieve pressure. Repair prime valve.		
	5. Suction hose connections.	5. Tighten any loose connections.		
	 Electrical supply with volt meter. Meter must read: 210–255 Vac. Low voltages reduce sprayer performance. 	 Reset building circuit breaker; replace building fuse. Repair electrical outlet or try another outlet. 		
	 Extension cord size and length; must be at least 12 gauge wire and no longer than 300 ft. Longer cord lengths reduce sprayer performance. 	7. Replace with a correct, grounded extension cord.		
	8. Leads from motor to pressure control circuit board (49) for damaged or loose wires or con- nectors. Inspect wiring insulation and terminals for signs of overheating.	8. Be sure male terminal blades are centered and firmly connected to female terminals. Replace any loose terminal or damaged wiring. Securely reconnect terminals.		
	9. For loose motor brush leads and terminals. See page 10.	9. Tighten terminal screws. Replace brushes if leads are damaged. See page 10.		
	10. For worn motor brushes which must be 1/2 in. minimum. See page 10.	10. Replace brushes. See page 10.		
	11. For broken and misaligned motor brush springs. Rolled portion of spring must rest squarely on top of brush.	11. Replace spring if broken. Realign spring with brush. See page 10.		
	12.Motor brushes for binding in brush holders. See page 10.	12. Clean brush holders, remove carbon dust with small cleaning brush. Align brush lead with slot in brush holder to assure free verti- cal brush movement.		
	13.Low stall pressure.	 13. Do either or both: a. Turn pressure control knob fully clockwise. Make sure pressure control knob is properly installed to allow full clockwise position. b. Try a new transducer. 		
	14.Motor armature for shorts by using an armature tester (growler) or perform spin test. See page 10.	b. Try a new transducer.14.Replace motor. See page 17.		

LOW OR FLUCTUATING OUTPUT

		WHAT TO DO When check is not OK refer to this column
Motor runs and pump strokes	1. Paint supply.	1. Refill and reprime pump.
	2. Intake strainer clogged.	2. Remove and clean, then reinstall.
	3. Suction tube or fittings loose.	3. Tighten; use thread sealant or sealing tape on threads if necessary.
	4. To see if intake valve ball and piston ball are seating properly. See page 18.	4. Remove intake valve and clean. Check balls and seats for nicks; replace if necessary, page 18. Strain paint before using to remove particles that could clog pump.
	5. Leaking around throat packing nut which may indicate worn or damaged packings. See page 18.	
	6. Pump rod damage.	6. Repair pump, page 18.
Motor runs but pump does not stroke	1. Displacement pump pin (32) (damaged or missing), page 18.	1. Replace pump pin if missing. Be sure re- tainer spring (31) is fully in groove all around connecting rod, page 18.
	2. Connecting rod assembly (43) for damage, page 16.	2. Replace connecting rod assembly, page 16.
	3. Gears or drive housing, page 16.	3. Inspect drive housing assembly and gears for damage and replace if necessary, page 16.

MOTOR IS HOT AND RUNS INTERMITTENTLY

TYPE OF PROBLEM	WHAT TO CHECK If check is OK, go to next check	WHAT TO DO When check is not OK refer to this column	
Motor is hot and runs intermit- tently.	1. Determine if sprayer was operated at high pressure with small tips, which causes low motor RPM and excessive heat build up.	1. Decrease pressure setting or increase tip size.	
	2. Be sure ambient temperature where sprayer is located is no more than 90°F and sprayer is not located in direct sun.	2. Move sprayer to shaded, cooler area if possible.	

ELECTRICAL SHORT

.

TYPE OF PROBLEM	WHAT TO CHECK If check is OK, go to next check	WHAT TO DO When check is not OK refer to this column		
Building circuit breaker opens as soon as sprayer switch is turned on.	1. All electrical wiring for damaged insulation, and all terminals for loose fit or damage. Also wires between pressure control and motor. See page 17.	1. Repair or replace any damaged wiring or terminals. Securely reconnect all wires.		
CAUTION	 For missing inspection plate gasket (see page 17), bent terminal forks or other metal to metal contact points which could cause a short. 	2. Correct faulty conditions.		
Any short in any part of the motor power circuit will cause the control circuit to inhibit sprayer operation. Correctly	 Motor armature for shorts. Use an armature tester (growler) or perform spin test. See page 10. Inspect windings for burns. 	3. Replace motor. See page 17.		
diagnose and repair all shorts before checking and replac- ing control board.	 Motor control board (49) by performing motor control board diagnostics on page 13. If diag- nostics indicate, substitute with a good board. 	 Replace with a new pressure control board (35). See page 13. 		
	CAUTION: Do not perform this check until mo- tor armature is determined to be good. A bad motor armature can burn out a good board.			
	1. Basic Electrical Problems on page 5.	1. Perform necessary procedures.		
Building circuit breaker opens as soon as sprayer is plugged	2. ON/OFF switch (58) See page 12. <i>Be sure sprayer is unplugged!</i> Disconnect wires from switch. Check switch with ohmmeter. Reading must be infinity with ON/OFF switch OFF, and zero with switch ON.	2. Replace ON/OFF switch. See page 12.		
into outlet and sprayer is NOT turned on.	3. For damaged or pinched wires in pressure con- trol. See page 13.	3. Replace damaged parts. See page 13.		
Sprayer quits after sprayer operates for 5 to 10 minutes.	1. Basic Electrical Problems on page 5.	1. Perform necessary procedures.		
	 Electrical supply with volt meter. Meter must read: 210–255 Vac . 	2. If voltage is too high, do not operate sprayer until corrected.		
	3. Tightness of pump packing nut. Over tightening tightens packings on rod, restricts pump action, and damages packings.	3. Loosen packing nut. Check for leaking around throat. Replace pump packings, if necessary. See page 18.		

Spin Test

Setup

Electric Shock Hazard; page 4.

To check armature, motor winding and brush electrical continuity:

Relieve pressure; page 4.

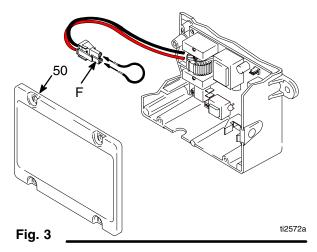

- 2. Remove drive housing; page 16.
- 3. Fig. 3. Remove pressure control cover (50). Disconnect connector (F).
- 4. Fig. 4. Remove motor shroud (23) and inspection covers (A).

Armature Short Circuit Test

Quickly turn motor fan by hand. If no electrical shorts, motor coasts two or three revolutions before complete stop. If motor does not spin freely, armature is shorted. Replace motor; page 17.

Armature, Brushes, and Motor Wiring Open Circuit Test (Continuity)

- 1. Connect red and black motor leads with test lead. Turn motor fan by hand at about two revolutions per second.
- If uneven or no resistance, check for: broken brush springs, brush leads, motor leads; loose brush terminal screws, motor lead terminals; worn brushes. Repair as needed; page 10.
- 3. If still uneven or no resistance, replace motor; page 17.

Motor Brush Replacement

Motor Brush Removal

Replace brushes worn to less than 1/2 in. Brushes wear differently on each side of motor, check both sides. Brush Repair Kit 287016 is available. Spring clip, 112766, may be purchased separately.

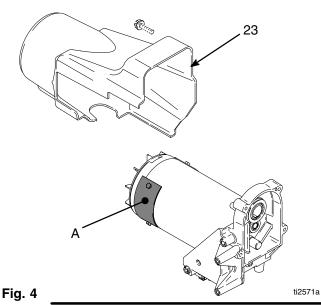

1. Read General Repair Information; page 4.

Relieve pressure; page 4.

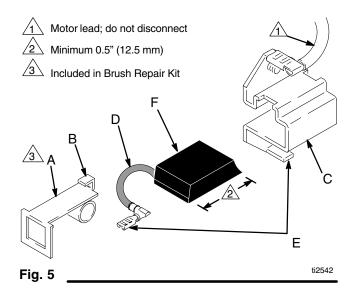

3. Fig. 4. Remove motor shroud (23) and two inspection covers (A).

(Continued on page 11)

Motor Brush Replacement

- 4. Fig. 5. Push in spring clip (A) to release hook (B) from brush holder (C). Pull out spring clip (A).
- 5. Fig. 5. Pull brush lead (D) out of terminal (E). Remove brush (F).

 Inspect commutator for excessive pitting, burning or gouging. A black color on commutator is normal. Have commutator resurfaced by a motor repair shop if brushes wear too fast.

Motor Brush Installation

A CAUTION

When installing brushes, follow all steps carefully to avoid damaging parts.

- 1. Fig. 6. Install new brush (F) with lead into brush holder (C).
- 2. Fig. 5. Slide brush lead (D) into terminal (E).
- 3. Fig. 6. Install spring clip (A). Push down to set hook (B) into brush holder (C).

- 4. Repeat for other side.
- 5. Test brushes.
 - a. Remove pump (41); Displacement Pump

Replacement, page 18.

- With sprayer OFF, turn pressure control knob fully counterclockwise to minimum pressure. Plug in sprayer.
- c. Turn sprayer ON. Slowly increase pressure until motor is at full speed.

Do not run sprayer dry for more than 30 seconds while checking brushes to avoid damaging displacement pump packings.

- 6. Install brush inspection covers and gaskets.
- 7. Break in brushes.
 - a. Operate sprayer 1 hour with no load.
 - b. Install pump (41); Displacement Pump Re-

placement, page 18.

On/Off Switch Replacement

Removal

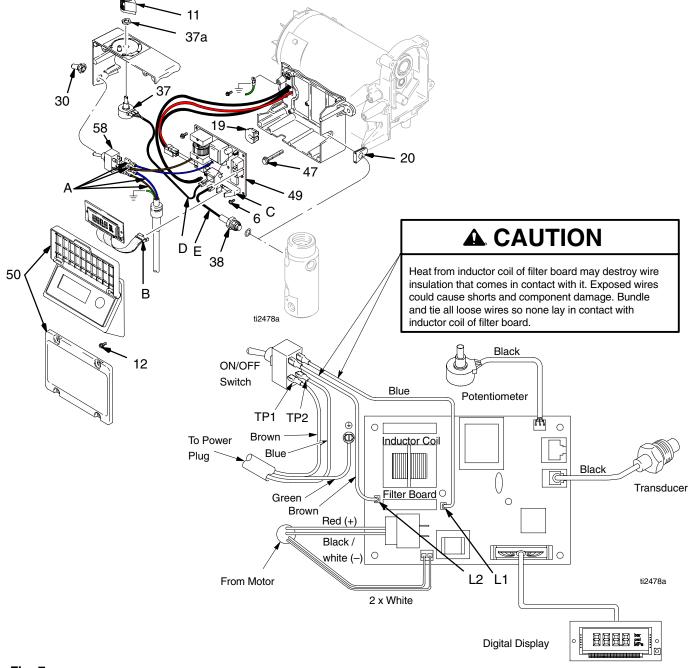

Relieve pressure; page 4.

- 2. Fig. 7. Remove four screws (12) and pressure control cover (50).
- 3. Remove display connector (B) from plug (C).
- 4. Disconnect four wires (A) from ON/OFF switch (58).
- 5. Remove toggle boot (30) and locking ring. Remove ON/OFF switch (58).

Installation

- 1. Install new ON/OFF switch (58). Install locking ring and toggle boot (30).
- 2. Connect four wires (A) to ON/OFF switch (58).
- 3. Install display connector (B) in plug (C)
- 4. Install pressure control cover (50) with four screws (12).

Pressure Control Repair

Motor Control Board

Removal

Refer to Fig. 7.

Relieve pressure; page 4.

- 2. Remove four screws (12) and cover (50).
- 3. Disconnect at motor control board (49):
 - Four motor leads: two white, black (–), or black/white (–), and red (+).
 - Lead (D) from potentiometer.
 - Lead (E) from transducer.
 - Lead (B) from display to plug (C), if display is installed.
- 4. Remove five screws (6) and circuit board (49).

Installation

- 1. Clean pad on rear of motor control board. Apply small amount of thermal compound 073019 to pad.
- 2. Fig. 7. Install motor control board (49) with five screws (6).
- 3. Connect to motor control board (49):
 - Lead (E) to transducer.
 - Lead (D) to potentiometer.
 - Four motor leads: two white, black (–), or black/white (–), and red (+).
 - Lead (B) from display to plug (C), if display is installed.
- 4. Bundle and tie all loose wires so none lay in contact with inductor coil (not 120 Vac sprayers). See **Wiring Diagram CAUTION**, Fig. 7.
- 5. Install cover (50) with four screws (12).

Motor Control Board Diagnostics

Note: Keep a new transducer on hand to use for test.

Do not allow sprayer to develop fluid pressure without transducer installed. Leave drain valve open if test transducer is used.

- 1. For sprayers with digital display, see **Digital Display Messages**, page 14.
- 2. Remove four screws (12) and cover (50). See Fig. 7.
- 3. Turn ON/OFF switch ON.
- 4. Observe LED operation and reference following table:

Relieve pressure and unplug sprayer before servicing control board; page 4.

LED BLINKS	SPRAYER OPERATION	INDICATES	WHAT TO DO
Once	Sprayer runs	Normal operation	Do nothing
Two times repeatedly	Sprayer shuts down and LED continues to blink two times repeatedly	Run away pressure. Pres- sure greater than 4500 psi (310 bar, 31 MPa) or dam- aged pressure transducer.	Replace motor control board or pressure transducer.
Three times repeatedly	Sprayer shuts down and LED continues to blink three times repeatedly	Pressure transducer is faulty or missing	Check transducer connection. Open drain valve. Substitute new transducer for transducer in sprayer. If sprayer runs, re- place transducer.
Four times repeatedly	Sprayer shuts down and LED continues to blink four times repeatedly	Line voltage is too high	Check for voltage supply prob- lems
Five times repeatedly	Sprayer does not start or shuts down and LED continues to blink five times repeatedly	Motor fault	Check for locked rotor, shorted wiring or disconnected motor. Repair or replace failed parts.

Pressure Control Repair

Digital Display Messages

No display does not mean that sprayer is not pressurized. Relieve pressure before repair; page 4.

DISPLAY	SPRAYER OPERATION	INDICATION	ACTION	
No Display	Sprayer stops. Power is not applied. Sprayer may be pressurized.	Loss of power	Check power source. Relieve pressure before repair or disassembly.	
3000 psi 김 0 bar 김 MPa	Sprayer is pressurized. Power is applied. (Pressure varies with tip size and pres- sure control setting.)	Normal operation	Spray	
Sprayer may continue to run. Power is applied.		Pressure greater than 4500 psi (310 bar, 31 MPa) or pressure transducer faulty	Replace pressure control board or pressure transducer.	
Sprayer stops. Power is applied.		Pressure transducer faulty, bad connection or broken wire.	Check transducer connection. Open drain valve. Substitute new transducer for transducer in sprayer. If sprayer runs, re- place transducer.	
E :04	Sprayer stops. Power is applied.	Line voltage too high	Check for voltage supply prob- lem	
8:05	Sprayer does not start or stops. Power is applied.	Motor fault	Check for locked rotor, shorted wiring or disconnected motor. Repair or replace failed parts.	
	Power is applied.	Pressure less than 200 psi (14 bar, 1.4 MPa)	Increase pressure if desired. Drain valve may be open.	
EMPTY	Sprayer stops. Power is applied.	Empty paint pail. Loss of pressure.	Refill paint pail. Check for leaks or clogged pump inlet. Repeat Startup procedure.	

Pressure Control Transducer

Removal

2.

Refer to Fig. 7.

- Remove four screws (12) and cover (50).
- 3. Disconnect lead (E) from motor control board (49).
- 4. Remove two screws (47) and filter housing (15).
- 5. Thread transducer lead plastic connector down through transducer grommet (20).
- 6. Remove pressure control transducer (38) and packing o-ring (3) from filter housing.

Installation

- Install packing o-ring (3) and pressure control transducer (38) in filter housing (15). Torque to 30–35 ft-lb.
- 2. Thread transducer lead plastic connector up through transducer grommet (20).
- 3. Install filter housing (15) with two screws (47).

- 4. Connect lead (E) to motor control board (49).
- 5. Install cover (50) with four screws (12).

Pressure Adjust Potentiometer

Removal

Refer to Fig. 7.

Relieve pressure; page 4.

- 2. Remove four screws (12) and cover (50).
- 3. Disconnect all leads from motor control board (49).
- 4. Remove five screws (6) and board (49)
- 5. Remove potentiometer knob (11), nut (37a) and pressure adjust potentiometer (37).

Installation

- Install pressure adjust potentiometer (37), nut (37a) and potentiometer knob (11).
 - a. Turn potentiometer fully clockwise.
 - b. Install knob at full clockwise position.
- 2. Install board (49) with five screws (6).
- 3. Connect all leads to motor control board (49).
- 4. Install cover (50) with four screws (12).

14 309733

Pressure Control Repair

Stored Data (Not available on all sprayers)

The SmartControl contains stored data to assist with troubleshooting and maintenance. To view this stored data on the digital display, proceed as follows:

Relieve pressure; page 4.

2. Plug in sprayer.

4. Release display button about 1 second after turning on sprayer.

Sprayer model number displays (U350, U450) for a few seconds and then data point 1 is displayed.

- 5. Push display button and next data point displays.
- 6. Turn sprayer OFF and then ON to leave stored data mode.

Data Point	Definition			
1	Number of hours power switch has been ON with power applied			
2	Number or hours motor has been running			
3	Last error code. Press and hold display button to clear error code to E=00			
4	Software revision			

3. Hold down display button and turn sprayer ON.

Drive Housing Replacement

Do not drop gear cluster (44) when removing drive housing (42). Gear cluster may stay engaged in motor front end bell or drive housing.

Disassembly

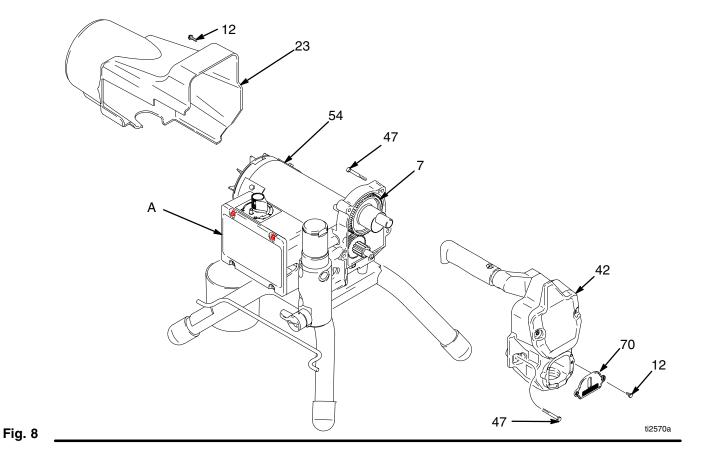

Relieve pressure; page 4.

- 2. Remove two screws (12) and pump rod cover (70).
- Remove pump (41); Displacement Pump Replacement, page 18.
- 4. Fig. 8. Remove two screws (12) and shroud (23).

- 5. Remove two front screws (47).
- 6. Remove two back screws (47).
- 7. Pull drive housing (42) off of motor (54).

Assembly

- 1. Fig. 8. Push drive housing (42) onto motor (54).
- 2. Install two front screws (47).
- 3. Install two back screws (47).
- 4. Install shroud (23) with two screws (12).
- Install pump (41); Displacement Pump Replacement, page 18.
- 6. Install pump rod cover (70) with two screws (12).

Motor Replacement

Disassembly

Relieve pressure; page 4.

2. Remove pump (13); Displacement Pump Re-

placement, page 18.

Do not drop gear cluster (44) when removing drive housing (42). Gear cluster may stay engaged in motor front end bell or drive housing.

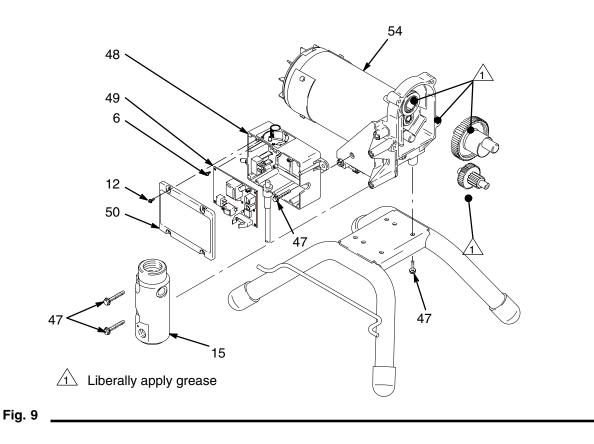

- 3. Remove drive housing (42); **Drive Housing Replacement**, page 16.
- 4. Remove four screws (12) and cover (50).
- 5. Disconnect all leads from board (49). Remove five screws (6) and board.
- 6. Remove strain relief (19; page 12, 13).

- 7. Remove two screws (47) and control housing (48).
- 8. Remove two screws (47) and manifold (15).
- 9. Remove four screws (47) and motor (54) from frame (59).

Assembly

- 1. Install new motor (54) on frame (59) with four screws (47).
- 2. Install manifold (15) with two screws (47).
- 3. Install control housing (48) with two screws (47).
- 4. Install strain relief (19; page 12, 13).
- 5. Install board (49) with five screws (6). Connect all leads to board.
- 6. Install drive housing (42); Drive Housing Replacement, page 16.
- 7. Install pump (13); Displacement Pump Replace-

ment, page 18.

ti2569a

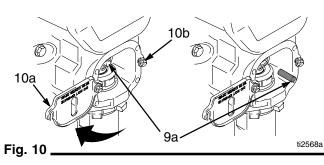

Displacement Pump Replacement

See manual 309053 for pump repair instructions.

See manual 309057 or 309058 for sprayer part number references.

Removal

- 1. Flush pump (13).
- 2. Relieve pressure; page 4.
- 3. Fig. 10. Loosen two screws (10b) and rotate cover (10a).

WARNING

If pump pin works loose, parts could break off due to force of pumping action. Parts could project through the air and result in serious injury or property damage.

If the pump jam nut loosens during operation, the threads of the drive housing will be damaged.

1. Fig. 12. Extend pump piston rod fully. Apply grease to top of pump rod at (A) or inside connecting rod.

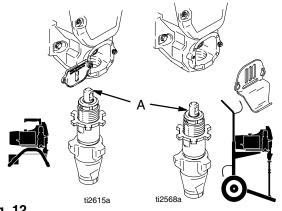

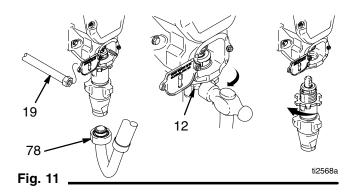

Fig. 12

 Fig. 10. Install pump pin (9a). Verify retainer spring (9b) is in groove of pump pin.

- 4. Cycle pump until pump pin (9a) is in position to be removed. Remove pump pin (9a).
- 5. Fig. 11. Remove suction tube (78) and hose (19).
- 6. Loosen pump jam nut (12). Unscrew pump.

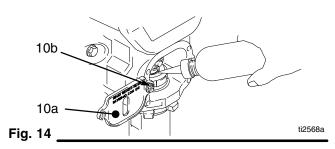

Installation

- 3. Push pump up until pump threads engage.
- 4. Screw in pump until threads are flush with drive housing opening. Align pump outlet to back.
- 5. Fig. 11. Install suction tube (78) and hose (19).
- 6. Fig. 13. Screw jam nut (12) up onto pump until nut stops. Tighten jam nut by hand, then tap 1/8 to 1/4 turn with a 20 oz (maximum) hammer to approximately 75 ± 5 ft–lb (102 N·m).

ti2568a

7. Fig. 14. Fill packing nut with Graco TSL until fluid flows onto top of seal.

8. Fig. 10. rotate cover (10a); tighten screws (10b).
